

Women's Center at Atrium

Located in the Professional Building next to Atrium, the Wilbur & Mary Jean Cohen Women's Center offers physicians more extensive diagnostic and support services to aid in patients' care.

With Breast Cancer accreditation, Atrium's Women's Center offers:

- Full-field digital mammography with Image-Checker Computer-Aided Detection System
- Breast biopsies: fine-needle aspiration, core biopsy, MRI-guided, and ultrasound-guided stereotactic breast biopsy
- Ultrasound of the breast
- MRI of the breast (performed in Medical Imaging)
- Ultrasound for OB/GYN conditions
- DEXA bone scan
- Health risk assessment
- Educational resource center

Minimally Invasive Treatment for Varicose Veins

To close and eliminate varicose veins, Atrium offers venous radiofrequency ablation. This outpatient procedure uses radiofrequency energy delivered through a catheter that causes the vein to heat and collapse. The procedure takes about an hour and is performed by a fellowship-trained interventional radiologist. This can provide faster recovery compared to surgical options. A physician referral is required for evaluation and treatment.

Same-Day Results for Diagnostic Tests

Diagnostic mammograms and ultrasounds are reviewed and discussed with patients before they leave the Women's Center, with reports sent to the referring physician the same day.

Screening mammograms typically are reviewed within two to four days. Normal results are sent to the referring physician as soon as the images are reviewed. If the results are abnormal, the referring physician is called immediately and the patient is contacted directly by letter.

Pelvic Floor Disorders Treatment

Atrium offers specialized physical therapy to relieve the symptoms of pelvic floor disorders in women, men and even young athletes. Conditions treated include:

- Bladder and bowel incontinence in men and women
- Prostatitis, postprostatectomy and pudendal nerve issues in men
- Pelvic floor pain and tension
- Pelvic organ prolapse
- Effects of perimenopause and menopause
- Issues during pregnancy and after delivery

Convenient for Patients

For patients' convenience, the Women's Center can coordinate multiple tests on the same day.

Screening mammography is also available offsite at Atrium Medical Center Laboratory and Mammography in Middletown. Weekday and limited Saturday appointments are available.
